

**International Standard
Regulations about Glass
Working Machines**

-

a proposal

ISO TC 195

- Up today ISO TC 195 has only one Sub Committee: SC1
- We propose the creation of SC2 related to Glass - Stone - Marble
- Under SC2 we propose the creation of three Working Groups:
 - WG1: Flat Glass Working Machines
 - WG2: Hollow Glass Working Machines
 - WG3: Marble and Stone Working Machines

WG1 - Flat Glass

This Working Group will be in charge of the Standards concerning the Flat Glass Working Machines, migrating the current European Standard Regulation (EN13035 series), integrating the missing parts and updating the obsolete ones.

WG2 - Hollow Glass

This Working Group will be in charge of the Standards concerning the Hollow Glass Working Machines, migrating the current European Standard Regulation (EN13042 series), integrating the missing parts and updating the obsolete ones.

WG3 - Marble and Stone

This Working Group will be in charge of the Standards concerning the Marble and Stone Working Machines, migrating the current European Standard Regulation, integrating the missing parts and updating the obsolete ones.

WG1 - the priorities

In order to provide all the Companies with ready-to-use Standards, and taking into consideration the spread of the different machines, we suggest the following priorities list (in descending order of importance):

1. CNC Working Center (now missing)
2. Cutting Machines (Horizontal and Vertical)
3. Grinding and Polishing Machines (Horizontal and Vertical Grinding Machines; Double edging Grinding Machines)
4. Cutting Machines for Laminated Glass
5. Washing Machines
6. Tilting Tables
7. Drilling Machines
8. Machines for the production of Laminated Glass
9. Machines and plants for the production of Insulating Glass
10. Machines for break-out
11. Machines and installations for stacking and de-stacking

Already under review the EN versions of:

- Storage, handling and transportation equipments inside the factory
- Storage, handling and transportation equipments outside the factory

WG2 - the priorities

In order to provide all the Companies with ready-to-use Standards, and taking into consideration the spread of the different machines, we suggest the following priorities list:

- Gob feeder
- IS Machines
- Handling Machines for feeding
- Presses

WG3

Due to the similar working processes, and in order to extend the interest scope, the creation of a Marble Stone Working Group is suggested.
